## WESTERNPIPS WEB CLICKER 1.9

Binary Options & Web Terminals Arbitrage Clicker

# WESTERNPIPS WEB CLICKER 1.9

## ABOUT WESTERNPIPS WEB CLICKER 1.9

**Using its years of experience** Westernpips Group company has developed a completely new product for the forex market, CFD's, binary options and trading on the Web platforms. This is the fifth generation program from the **company's leader in the development of technologies for arbitrage and high frequency trading**. No analogues in the network! Introducing the new Westernpips Web Clicker 1.9

Hurry up to buy now and become the first who can take advantage of all the benefits of the new program.

99 % of Brokers are not yet ready for this powerful tool and all the doors for work and earnings are open for you!

Now we offer the best ratio of price, quality and features of the program. The functionality and the number of available brokers will be expanded every day and now you purchase the product at the best price, as in the future the price will be much higher! For those who buy now all updates for free!

So, what are the main advantages of the new program?

First, it is a universal clicker that can be adapted to work on any terminal of a broker, be it a web platform or any other terminal for trading stocks, futures, forex, binary options or any other market you need. You only need to specify the place from where to read the quotes and set up clicks on the buttons, after which the trading algorithm on the full machine will do all the work for you, and the broker will not even suspect that you have traded using third-party software.

**The secret technology of working with the broker's web terminal allows you to completely imitate manual transactions and button clicks as a regular trader would.**

The strategy of the program is Latency Arbitrage or lagging quotes - one of the most profitable, risk-free and highly profitable trading systems to date!

The program receives the fastest quotes directly from exchanges from Westernpips Trade Monitor 3.7 software.

You will have a guaranteed advantage in the rate of obtaining quotes compared to quotes from binary options brokers or forex broker's web platforms. Lmax, Rithmic, CQG, Gain Futures, Saxo Bank, Interactive Brokers, IQ Feed, CTS T4, connectors from MT4 / MT5 / cTrader terminals and FIX / API quotes can be connected to the program of your choice.

We adapted the clicker to work on the main binary options brokers: Olymp Trade, Binary, Binomo, FinMax, Migesco, HighLow, as well as Forex Web brokers FXCM, ActiveTrades, DucasCopy, IG Trading and Meta Trader 5 Web terminal.

The complex adaptation algorithm for each broker allows you to work on the broker in hidden mode, using several currency pairs at once, track open positions and work as a clicker even when the terminal is minimized. In the near future, the program will be adapted for more than 100 brokers and customers who bought the current version will receive all updates free.

**You can follow the news and get more information on our website:**

# INSTALLATION AND STARTING THE PROGRAM WESTERNPIPS WEB CLICKER 1.9

## CUSTOMER IDENTIFICATION: HOW TO OBTAIN A LICENSE

To access the program you will need a login and password.

First, you need to install the program on your VPS or computer (it is better to use a dedicated server or VPS).

1. Run the installation file of the program Westernpips Web Clicker 1.9 Install.exe;
2. After the installation is complete, a shortcut will appear on the desktop, launch it;

3. A login form will start, where you need to first enter your email in the Client Login field and send a license registration request by clicking on the "SEND APPLICATION" button and on further launches simply press the "LOGIN TO WEB CLICKER" button;

4. To register a new license, you must:

*a) Enter your email in the Client Login field.*

*b) Click the "Send Application" button*

*c) If the license registration request is successful, you will see the message*

As soon as our administrator approves your request, you will be able to log into the program with your new login.

Requests for registration of a license are processed from 1-3 days.

You can also contact our customer support and speed up the license activation process.

Skype: [group.westernpips](#)

E-mail: [westernpips.group@gmail.com](mailto:westernpips.group@gmail.com)

*d) If you see any other error message on the screen, contact us to fix the problem.*

### **How to change your login if you forgot it or changed IP or VPS server**

A license is created for a specific VPS or computer with an IP address binding, and you cannot use the same username from another location.

First of all, send a request to email [westernpips.group@gmail.com](mailto:westernpips.group@gmail.com) with a request to delete your old login. Once the administrator deactivates your old license, you will need to send a request to register a new license. Requests to delete and register a license are processed from 1-3 days. You can also contact our customer support and speed up the process of removing and activating a license. Replacement of licenses is free at the request of the client.

If your license is active, you will see the main window of the program Westernpips Web Clicker 1.9.

When you first start the program, you will not see some of the information, as for this you need to select a broker to trade and log into your account to start trading. Automated trading will also be available only after you open accounts on the brokers you need from the list on the left side of the program, replenish them and only after that you can start automated trading. To start and get acquainted with the interface of the program you need to use a demo account.

***We strongly recommend trading on a demo account for two weeks and only then proceed to trading with real money. Software Westernpips Web Clicker 1.9 is a complex algorithmic program and it requires the appropriate knowledge and experience in its use. Westernpips Group is not responsible for all possible profits and losses incurred by the Client as a result of the program. Be extremely careful when using the program on real money and do not leave the program unattended!***

# PROGRAM CONFIGURATION WESTERNPIPS WEB CLICKER 1.9

## SETTINGS AND TRADE ON BINARY OPTIONS BROKERS AND WEB PLATFORMS, CONNECTION SETTINGS

The current version of the program is connected to the largest binary options brokers today. This list will be constantly expanded as the program expands and its functionality.

- **ALPARI;**  
<https://alpari.com>  
The largest broker in the CIS Forex and Binary Options.  
Currency pairs: Basic + Bitcoin;  
Winning interest: 70-80-90%;  
Expiration: from 30 seconds;
- **OLYMP TRADE;**  
<https://olymptrade.com/platform>  
The largest broker in the CIS Forex and Binary Options.  
Currency pairs: Basic + Bitcoin;  
Winning interest: от 20 до 85%;  
Expiration: **from 1 minutes;**
- **BINARY;**  
<https://www.binary.com>  
The largest broker in the CIS Forex and Binary Options.  
Currency pairs: Basic + Bitcoin;  
Winning interest: от 70 до 100%;  
Expiration: **from 3 minutes;**
- **BINOMO;**  
<https://binomo.com>  
The largest broker in the Binary Options.  
Currency pairs: Basic + Bitcoin;  
Winning interest: от 70 до 80%;  
Expiration: **from 1 minutes;**
- **FINMAX;**  
<https://finmaxbo.com>  
Broker Binary Options.

Currency pairs: Basic + Bitcoin;  
Winning interest: от 20 до 85%;  
Expiration: **from 30 seconds**;

- **MIGESCO;**

<https://migesco.com>

Broker Binary Options.

Currency pairs: Basic + Bitcoin;  
Winning interest: от 70 до 90%;  
Expiration: **from 30 seconds**;

- **DUCASCOPY;**

<https://www.ducascopy.com>

Bank and Forex Broker with its own Web terminal JFOREX

Trade in 1 click;

The screenshot displays the Westerpips Web Clicker 1.9 trading terminal. The interface includes a top navigation bar with the logo and trader name, a left sidebar with various platform logos, a central area with a 'New Order' form for EUR/USD, and a right area with multiple charts for EUR/USD, USD/CHF, GBP/USD, and USD/JPY. The 'New Order' form shows a bid of 1.14 and an offer of 1.14522. The charts display various indicators and timeframes. The bottom section contains a 'TRADING' area with a 'Feed' table, 'OpenOrder', 'CloseOrder', and 'Misc' settings, and a 'Chart' area. A large 'WESTERPIPS' watermark is visible across the bottom half of the image.

- **IG TRADING;**

<https://www.ig.com>

Forex Broker with its own Web terminal

**Trade in 1 click;**

The screenshot displays the Westernpips Web Clicker 1.9 trading terminal. At the top, it shows the user's name 'westernpips@gmail.com' and account details: Funds US\$0.00, Profit/Loss US\$0.00, Margin US\$0.00, and Available US\$0.00. The main window is titled 'IG Trading Positions' and features a search bar and a list of asset classes on the left sidebar. The central chart area shows a candlestick price chart for 'Wall Street Cash (£1)' with a current price of 24966.1. Below the chart, there are buttons for 'GapBuy' and 'GapSell', and a message stating 'You have no open positions.' The bottom section, labeled 'TRADING', contains several configuration panels: 'OpenOrder' (Minimum Level: 25), 'CloseOrder' (Minimum Level/Close: 0), and 'Misc' (FAST ASK: 0, FAST BID: 0, Order state: None, Trading timeout: 60s). A 'LOG' bar at the very bottom indicates the application started on 20.11.2018 at 11:40:54.

## *A little about arbitration strategy.*

---

The program Westernpips Web Clicker 1.9 works according to the Latency Arbitrage algorithm (delayed arbitration, price arbitrage, trading on the backlog of quotes).

To work successfully with this algorithm, you need to connect to a fast flow of quotes (via Westernpips Trade Monitor 3.7), as well as a powerful VPS server (or dedicated server) with minimal ping to the fast quotes provider and the broker where you plan to trade. Choosing the right cent date is a key point that should not be ignored. If you did everything correctly, you will receive fast quotes at a speed of less than a millisecond and you will have a guaranteed advantage in the speed of receiving data over the broker's Web terminal.

Quotations hang occurs due to errors in the broker's software and problems on its server. The broker can also use the Bridge (bridge) connecting it with the liquidity provider. Due to this, quotes can also slow down. Especially strongly, the difference in quotes is noticeable on the large volatility of the market, at the time of the release of important economic news, the publication of analysts of rating agencies, changes in economic data, and so on.

Westernpips Trade Monitor 3.7 is a universal software that allows you to receive the fastest quotes from the largest liquidity providers today: Rithmic, CQG, Interactive Brokers, CTS T4 from America, Lmax Exchange, Saxo Bank, Gain Futures, IQ Feed Of Europe. To work with these providers you need to open a demo or live account. For the use of quotes may be charged a monthly fee.

You can also use free quotes via Westernpips Server Feed (our own fast quotes server from Lmax Exchange and Rithmic).

# STARTING AUTOMATIC TRADE IN THE PROGRAM WESTERNPIPS WEB CLICKER 1.9

## STRATEGY SETTINGS AND PROGRAM INTERFACE

Install vc\_redist.x64.exe and vc\_redist.x86.exe from the Setup Files folder

1. After the first launch of the program, you will need to select a broker to trade from the list in the left part of the program in the "PLATFORMS" panel.

**What type of software you can use depends on your type of license. You can choose binary options brokers (700 USD) and brokers for trading on web terminals (1300 USD). Full license (1800 USD) allows you to work there and there.**

Select a broker and click on its icon to open a browser tab for working with this broker.

After that, a new tab will be created with the name of the broker and the selected currency pair.

1. Select the desired currency pair or trading instrument and make this tab active.

**Important!** Quotes are read from the current active tab of the terminal for the currency or symbol that you have open and visible in the terminal. Do not confuse tabs!

Quotes are read from the broker's platform automatically and displayed on a special panel in the program in the Price column.

**For binary options brokers this is the bid price.**

Price
1.14547
Gap 13:53 GMT+3
0.00

**For Brokers with a Web Terminal, this is the Bid price and the Ask price.**

Ask	Bid
24964.94	24963.21
GapBuy	GapSell
0.00	0.00

If you for some reason do not display quotes, contact our customer support to eliminate possible errors.

---

### *Launch Fast Quotes.*

---

1. Next, you need to run the Westernpips Trade Monitor 3.7 program to connect fast quotation providers or advisors connectors in the Meta trader 4 / Meta Trader 5 / cTrader / Ninja Trader 8 terminals (from the Multi Connectors folder).

*Instructions for launching fast suppliers of quotes are on our website:*

<https://westernpips.ru/Arbitrage Forex Software Trade Monitor 3.7 Exclusive User Guide New!.pdf>

*Description of the program Westernpips Trade Monitor 3.7 is on our website:*

<https://westernpips.ru/new version westernpips ea.html>

## BRIEF INSTRUCTIONS FOR THE LAUNCH OF WESTERNPIPS TRADE MONITOR 3.7

Install Westernpips Trade Monitor 3.7 (the installation file is located in the program files folder).

Run the program by clicking on the shortcut on your desktop.

A login form will appear where you need to enter your email and click the "Login To Trade Monitor" button. If you do not have a registered login, click the "Send Application" button and wait for the license to be activated.

Next, in the main window of the program, select the supplier of fast quotes you need by clicking on the button with the name of the supplier or on the “Multi Connectors” button to select other suppliers from the list. Next, enter your login and password and click the “Start” button to start the quote monitor. By clicking the “Instruments” button you can select the available trading tools.

**To connect to free quotes from our server, select the “Use server Feed” checkbox and just click the “Start” button (no need to enter your login and password!). This feature is only available for Lmax and Rithmic.**

After that, the monitor will start with fast quotes.

## How to run automated trading in Westernpips Web Clicker 1.9

---

We have created the best algorithm for working on the **latency arbitrage** strategy. You have access to the basic settings that will help you earn, without any difficulties. At your choice, we offer all currently available suppliers of fast quotes. Also available are settings for the speed of the program and its modules for optimizing CPU usage and using computer resources. Adjust the levels for opening and closing trades and you can start trading! The lot is set manually on the broker's platform! Do not forget to set the option **“trade in 1 click”** on your broker.

**Feed Settings:** setting up connections to fast quotes providers.

**Fast Provider** – selecting a quick supplier of quotes from the list

**Fast Symbol Code** – The name of the instrument in the fast data feed provider;

For example:

EURUSD for Lmax Exchange.

For MetaTrader4 / MetaTrader5 Connector EURUSD\_874590 (where 874590 is the account number in MetaTrader4 where the advisor connector is running).

- Saxo Bank
- Lmax Exchange
- CQG
- Rithmic
- MetaTrader 4 Connector
- MetaTrader 5 Connector
- cTrader Connector
- Ninja Connector
- Interactive Brokers
- IQ Feed
- Westernpips FIX Trader 3.9 Feed
- OEC Gain Futures
- CTS T4

**FAST DATA FEED SELECT BOX**

Using fast data feed from Multi Connectors EAs

**PRICE SCANNER**  
Displays the bid (ask) price read from the broker platform

**LATENCY ARBITRAGE SYSTEM** - class of high-frequency trading strategies relies exclusively on ultra-low latency direct market access technology.

The screenshot shows the Price Scanner interface with the following elements:

- Price:** 1.14039
- Gap:** -1.00
- Stop/Start Trading Button:** A red button with a play/pause icon.
- OpenOrder section:**
  - MinimumLevel: 25
  - ShiftAsk: 0, ShiftBid: 0
  - AvtoShiftBid:
  - AvtoSettings:
- CloseOrder section:**
  - MinimumLevelClose: 0
  - FixTP: 1
  - FixSL: 7
  - Allow Close:
- Misc section:**
  - Trading timeout (sec): 60
  - Terminal sleep (ms): 3
  - Confirm sleep (ms): 50
  - Sounds:
  - Show chart:

Gap - difference in pips between fast and slow broker price

**MINIMUM LEVEL** - the minimum price gap for open order

Pause after opening order. For binary options brokers, this is the expiration time of the option.

Allows you to adapt the program to work on your VPS as fast as possible.

The speed of updating the status of open positions

Set up the number of decimal places in the instrument price (digits)

**AUTOSHIFTBID** - algorithm for automatic alignment of quotes (smoothing)

**AUTOSETTINGS** - automatic calculation of settings by the spread coefficient (suitable for CFD's indexes, stocks, metals)

**MINIMUM LEVEL CLOSE** algorithm for closing a deal when aligning quotes to a specified level.

**FIXTP** - close order by profit  
**FIXSL** - close order by stoploss

**Slow Provider** – Connect similar quotes from the right supplier. This function can be used if you want to trade a clicker on the Web platform, and take quotes for comparison, for example, from a similar MetaTrader4 / MetaTrader5 / cTrader terminal on the same broker. In this case, quotes for comparison will not be read from the Web platform, but from where you specify. In order for quotes to be read from the Web platform, you need to select Price Scanner.

**Slow Symbol Code** – the name of the instrument in the connected analog of quotations. You only need to fill in if you have a Slow Provider connected, if Price Scanner is connected, then you do not need to fill this field.

**Info Settings:** information settings of the program.

**Fast Ask/Fast Bid** – if the quotes from the fast quotes provider are connected successfully, you will see the Bid / Ask values here. If you have connected something incorrectly or you do not have the program running at Westernpips Trade Monitor 3.7, the quotes will not appear here, and you will see a message that:

**PipSize** – the number of decimal places in the value of quotes (Digits).

This is a very important point and all calculations depend on it! Be careful!

*For Example:*

*For EURUSD: if you have a 5 digit quote of 1,12385, then PipSize = 0.00001*

*For EURUSD: if you have a 4 digit quote of 1,1238, then PipSize = 0.0001*

*For USDJPY: if you have a 3-digit quotation 117.256, then PipSize = 0.001*

*For GER30: if you have a 2 digit quote of 11337.25, then PipSize = 0.01*

*For GER30: if you have a 2 digit quote of 11337.25, then PipSize = 0.01*

*For UK100: if you have 1 digit quotation 7037,5 then PipSize = 0.1*

**OrderState** – display the status of the current signal (if you had a request to open or close an order, you will see this signal here).

**OpenOrder Settings:** settings for opening deals.

**MinimumLevel** – minimum gap quotations (GAP) for the transaction.

It is calculated either in points and depends on the size of PipSize, or it is the spread coefficient (if the option AutoSettings = true) is enabled;

For example:

for EURUSD, if PipSize = 0.00001 and AutoSettings = false, you need to set MinimumLevel = 25 (this is 25 points in the 5-digit quotation);

for EURUSD, if PipSize = 0.00001 and AutoSettings = **true**, you need to set MinimumLevel = 2 (this is 2 \* points spread over 5-digit quotes);

for EURUSD, if PipSize = 0.0001 and AutoSettings = false, you need to set MinimumLevel = 2.5 (this is 2.5 points per 4-digit quotation);

for GER30, if PipSize = 0.1 and AutoSettings = **true**, you need to set MinimumLevel = 1.3 (this is 1.3 \* point spread per 1-digit quotation);

**Shift Ask/Shift Bid** – manual correction (shift of quotes) in the direction you need. It is used at your discretion in case the quotes on the fast and slow supplier of quotes differ in a calm market by an amount greater than the spread. There is also an automatic algorithm for aligning quotes, which runs when AutoShiftBid = true;

**AutoShiftBid** – true / false; the inclusion of the automatic alignment algorithm quotes (smoothing); We recommend using it for trading on indices, CFD`s, stocks, gold, when there is a comparison of quotes with the price of the futures.

**AutoSettings** – true / false; automatic calculation of settings for the spread coefficient (suitable for CFD`s indexes, stocks, metals).

*If AutoSettings = true, then the MinimumLevel, MinimumLevelClose, FixTP, FixSL settings should be set as the coefficients of the spread.*

*If AutoSettings = false, then the MinimumLevel, MinimumLevelClose, FixTP, FixSL settings should be set in points (depending on the PipSize value).*

**CloseOrder Settings:** settings for closing deals.

**MinimumLevelClose** - algorithm for closing a deal when leveling quotes to a specified level (GAP); It is calculated either in points and depends on the size of PipSize, or it is the spread coefficient (if the option AutoSettings = true) is enabled; If MinimumLevelClose = 0, then this algorithm for closing a deal is disabled and only fixTP, FixSL closing algorithms work.

*For example: If the gap of quotations (GAP) was 35 points, and the value MinimumLevelClose = 10; then the transaction will be closed if the quotes break in the opposite direction by -10 points.*

**FixTP** - algorithm for closing deals by profit. If the profit on the transaction is greater than the value of FixTP, then the transaction will be closed automatically.

**FixSL** - algorithm for closing deals at a loss. If the loss on the transaction is greater than the value of FixSL, then the transaction will be closed automatically.

*FixTp / FixSL values should be set either in points, taking into account the value of PipSize, or in the spread coefficient (if the option AutoSettings = true is on).*

**AllowClose** - true / false; If this option is not enabled, then transactions will not be closed at all! For binary options brokers there is no need to close trades, so this option can be disabled for them.

**Misc Settings:** settings for closing deals.

**Trading Time Out (sec)** – trading time out; applies only to binary options brokers, and affects the frequency of opening new transactions. If Trading Time Out = 60 seconds, then the next trade will open no earlier than in 60 seconds;

**Terminal Sleep (ms)** - The speed of work and reading the algorithm of the program in milliseconds. Allows you to adapt the program to work on your VPS as fast as possible.

**Confirm Sleep (ms)** - Update rate of open positions

**Sounds** - true / false; enable / disable beeps when opening / closing trades;

**Show Chart** - true / false; enable / disable the display of the analytical graph for Price and Gap values;

# How to set up automated trading of a universal clicker in Westernpips Web Clicker 1.9

Universal clicker and price scanner is a powerful tool that allows you to read quotes from any terminal or platform. A graphical scanner is used and you will need to specify an area for reading quotes. You can also set up up to 5 combinations of clicks in a row for opening / closing deals, bypassing any broker bans.

The screenshot displays the Westernpips Web Clicker 1.9 interface. The top bar includes the logo, version (1.9), date (27 November 2018), and user information (Trader Name: westernpips@gmail.com). The main interface is divided into several sections:

- PLATFORMS:** A sidebar on the left lists various trading platforms: Universal, Alpari, Olymp, Binary, Binomo, FinMax, Migesco, and HighLow.
- Price scanner [ASK]:** This section is active, indicated by a checked checkbox. It features a "Set Ask Area" button (highlighted in red in the original image) and a "Show Area" button. Below this, there are settings for "Buy" and "Sell" orders, each with a table for "Click number#1" through "Click number#5". The "Buy" table shows X: 1698, Y: 377, and Delay(ms): 0. The "Sell" table shows X: 1783, Y: 629, and Delay(ms): 0.
- Ask Bid:** A section showing current market data for Ask (0) and Bid (0), along with GapBuy and GapSell values (both 0).
- TRADING:** A section containing various trading parameters such as "Fast provider", "Pip size", "Order state", "MinimumLevel", "FixTP", "FixSL", "Trading timeout (sec)", "Terminal sleep (ms)", "Confirm sleep (ms)", "Sounds", and "Show chart".
- LOG:** A bottom bar with "Clear" and "Copy" buttons.

**“Set Ask Area”** button – selection of the area for reading the Ask quotes (the Price scanner [ASK] checkbox should be turned on). To select the desired area, click the Set Ask Area button, then move the mouse pointer to the place where

the Ask quotation is visible, move the mouse exactly to the upper left edge and press CTRL, then, without releasing the **CTRL** key, select the entire visibility area of the quotation to the lower right corner and release CTRL. You can check which area you selected by clicking on the "Show Area" button;

**"Set Bid Area"** button – selection of the area for reading quotes Bid. To select the desired area, click the Set Bid Area button, then move the mouse pointer to the place where the Bid quote is visible, move the mouse exactly to the upper left edge and press CTRL, then release the CTRL key and select the entire visibility area of the quote to the lower right corner and release CTRL. You can check which area you selected by clicking on the "Show Area" button;

This is what a properly selected area looks like from where quotes will be read:

^ SILVER CMD	+0.15%	14.112	14.165
v OIL CMD	-1.05%	60.34	60.40
v EURUSD FX	-0.06%	1.12867	1.12884
^ GBPUSD FX	+0.29%	1.27718	1.27767
^ DE30 IND	-0.18%	11304.4	11306.4

**Click Buy/Sell/Close Settings:** we created a universal clicker in which you can set any combination of clicks for opening and closing deals (up to 5 levels of clicks with the ability to set the required delay between clicks).

**"Set Points"** button customizes the area to click on your screen.

To specify the area for a click, click the "Set Points" button and move the mouse pointer to the desired button >>> then press the CTRL button, if you need to configure another additional click, move the mouse pointer to the next button and press the CTRL button and act similarly to set areas for up to 5 clicks. If you have configured all areas to click, press the ESC key to exit setup mode.

This click setting algorithm is similar for all Buy / Sell / Close events.

The delay between clicks can be set to **“Delay”** in milliseconds.

X / Y values are information about click coordinates.

You can find out which area you marked for a click by clicking on the **“Show points”** button.

You can check how click works by clicking the **“Click”** button. 1 click will be simulated.

The correct option is to click on Buy;

**Attention!!!** If you set up all the clicks and price recognition area, you can not mix with respect to the screen or minimize the area where you set up clicks! For any mix you have to do everything again, because in this mode the program clicks on the area on the screen!

If you cannot read the quotation as a universal scanner, try zooming in the browser so that the numbers can be seen more clearly!

For the convenience of working with the program, a trading log is implemented, which displays all information about current transactions, the opening / closing price of the transaction, slippage and the Gap value at which the transaction was opened.

## CONTACT US

The company Westernpips Group positions itself in the market as a high-tech company with its algorithmic systems, advanced IT infrastructure, large-scale developments and a wide range of various services. The programs is one of the main information products of the Company.
